## COLLOQUIUM AND Q&A

## Mathematics: It's What's for Diner

Ryan Croke Applied Mathematician Chefsteps

3:30 PM, Thursday, January 26, 2017

Cudahy Hall, Room 412

Abstract

At Chefsteps I use the tools of mathematics, statistics and computer science to solve realworld problems. Chefsteps was founded on the idea of using innovative technology and design to improve the cookexgerience. I will detail a few examples of how the mathematics team has done this, and some of our plans for the future. Most of the talk will focus on two topics: (1) The mathematics of Sous-Vide cooking, and (2) our research and work into nonline and a Filters and why we need them. Time permitting we can talk about some smaller projects such as our work with signal processing for MEMS sensors, how we account for hardware discrepancies, and thermal modeling. I will also touch on the start scene in Seattle and how mathematics is needed in the high tech community.

Q&A on "Industry opportunities for MSCS Majors" will follow Dr. Croke's talk.

1313 W. Wisconin Avenue, Cudahy Hall, Room 412, Milwaukee, WI 53201881 For further information: see <u>http://www.marquette.edu/mscs/resourcescolloquium.shtml</u> or contact Dr. Sarah Hamilton #414288-6343,<u>sarah.hamilton@marquette.edu</u>

*Post colloquium* refreshments served in cuda hy hall, room342 at 4:30 P.m
